

## MEAN/MERN Stack Developer Machine Test

---

Note: this is a 3-hour test

1. Run Angular/ ReactJs on port 5000.
2. Create a registration form with **proper Validations** having fields  
Name, Email, Mobile, Password, Confirm password  
Password must include at least an uppercase, a number & a special character.
3. Replicate the same on a button click, means multiple registration can be performed at a single time.
4. Submit the form using node API & Mongo DB (Password must be encrypted or hash) (use Mongoose)
5. Create an API for login.
6. Create a web socket connection after login.
7. Use an image as background, image always be in full screen whether it is rendered on any device (responsive).
8. Send mail to users after registration. (Use your own Gmail cred.)
